

Weightbox

Workbox

More than just a weight block

**Sealed
Against
Water &
Dust**

RyeteC's WeightBox & Workbox have been designed to offer effective counterweights for tractor front and rear mounting, whilst offering excellent secure and easy to access tool storage in a full width toolbox, which offers huge capacity without stacking tools on top of tools.

Tools own storage boxes are easily accommodated in their original cases (Socket sets etc) and sit on the non-slip rubber mat base of the toolbox, the full width "bonnet" is sealed against dust and water ingress and has a simple spring release system (which can be locked for security) for quick and easy access. Twin gas struts support the bonnet in the open position for easy access to the full tool box even in windy conditions.

**Front or Rear
Mounted**

Separate compartments are situated across the front of the WeightBox & Workbox which is ideal to keep grease guns and oil cans separate from tools.

Lighting

The WeightBox & Workbox have LED hazard strobes, twin front work lights and tool box lights as standard, but with a multi fit system which allows for customisation and fitment of light bars etc protected by the frame of the unit and a customised front plate which also can incorporate company names and with backlight if required.

The Workbox shares all the features of the WeightBox but offers a lower permanent counter weight with greater capacity, for mobile workshop application and total independence for contractors and large farmers out in the field with limited access to workshop facilities.

The Workbox can carry spare parts for machines, extra supplies for baling operations or even extra fuel and Addblue. It offers the opportunity to carry specialist tools, AC 240volt power adaptor to operate power tools, a welder or even a hydraulically driven power washer which can run on mains water supply or an internal supply to clean implements, windows and wheels between jobs, we can customise these units with vices and even heavy duty work benches, reducing down time and increasing productivity.

WeightBox;

Available in weight sizes;

1000, 1500 and 2000Kgs with standard features;

- Cat 2 linkage mounting
- Permanent concrete counterweight
- Can be front or rear mounted
- Full width toolbox with non-slip rubber mat base
