

RYETEC RESTORER GLD

GRASSLAND LOW DISTURBANCE SUBSOILER

Manufactured by Ryetec the Restorer GLD is a low disturbance grassland subsoiler designed to loosen the soil, break the pan, allow for better drainage, remove compaction and improve aeration.

The discs cut the initial surface allowing for the legs to follow breaking up the subsurface. This creates fissures for roots to grow into, water to drain away and improved access to oxygen. The packer roller then closes up the grass surface to leave it virtually undisturbed.

All this leads to restoring your grassland for more productive grass growth, extended grazing and forage producing seasons.

Standard Specification

- » Pivoting legs and discs on same axis are great for use in stony ground.
- » Shear bolt as standard with auto reset option.
- » 550mm rear packer roller with ridge and Gutter options
- » Hydraulic packer depth control with stop spacers
- » Heavy duty frame construction with CAT 2 and 3 linkage
- » Choice of legs.
- » Working depth up to 500mm.
- » Weighs 1600KGS
- » Water fillable packer roller available as an option
